Wapiti Pasture is a native habitat builder consisting of a perennial grass and legume mix. It provides excellent nutrition for deer and elk and many other browsing species. Wapiti Pasture is easy to establish and has very deep roots that make it drought tolerant. This mix works well in wet pastures and dry sites alike as it is a combination of Facultative Wetland (FACW) species and Facultative Upland (FACU) species. Many of the species are recommended by the Department of Fish and Wildlife for restoration of native forage areas.
