

Green Grass Ranch Multi-Purpose Pasture Mix is an excellent forage mix for multiple grazing animals. It is also a high producing pasture mix for hay production. This mix is made up of 90% grass and 10% legumes, which will provide the essential feed grasses for farm production. The varieties selected for this mix work well in multiple harvest schemes including; hay, green-chop, haylage, and grazing. This mix also works well in heavier soils. Green Grass Ranch Multi-purpose Mix is endophyte-free.

**Applications:**

- Use for a grass/legume pasture or hay mix.
- Versatile - use for cattle, sheep, wildlife and other livestock.
- Use for a new grass-legume hay field.

**Seeding Rates:**

Seeding Rates for a new pasture or hay field should be 50 lbs/acre, 75 lbs/acre if broadcast.

**Method of Seeding:**

Use of a Brillion seeder, a no-till drill or a culti-packer is ideal. Seed to soil contact is vital to having a successful stand. Take caution to not plant the seed more than 1/4" deep. Each of these grasses needs proper management on initial grazing and weed control to offer the best pasture.
